

INTERNSHIP TASK ASSIGNMENT

Position: Artificial Intelligence (AI) Internship

Duration: 6 Weeks (2 Months)

Mode: 100% Remote

WEEKLY TASK BREAKDOWN

WEEK 1: Python for AI

- Set up Jupyter Notebook/Colab
- Learn NumPy for numerical computing
- Master Pandas for data manipulation
- Use Matplotlib/Seaborn for visualization
- Target: Data analysis skills

WEEK 2: Machine Learning Basics

- Understand supervised vs unsupervised learning
- Learn scikit-learn library
- Implement regression algorithms
- Practice classification models
- Target: ML fundamentals

WEEK 3: Deep Learning Introduction

- Learn neural network basics
- Set up TensorFlow/Keras
- Build first neural network
- Understand backpropagation
- Target: Deep learning basics

WEEK 4: Project Implementation

- Choose project: Chatbot OR Image Classifier
- Collect and preprocess data
- Build and train model
- Tune hyperparameters
- Target: Working model

WEEK 5: Model Optimization

- Implement regularization techniques
- Use dropout and batch normalization
- Apply data augmentation
- Improve model accuracy
- Target: Optimized model

WEEK 6: Deployment & Documentation

- Create API for model using Flask
- Deploy to cloud platform
- Write project documentation
- Create demo video
- Target: Deployed AI solution

TARGET:

Build and deploy working AI/ML model

LEARNING RESOURCES & YOUTUBE LINKS

- ML Tutorial: <https://www.youtube.com/watch?v=Gwlo3gDZCVQ>
- Deep Learning: <https://www.youtube.com/watch?v=aircArvnKk>
- TensorFlow: <https://www.youtube.com/watch?v=tPYj3fFJGjk>
- Project Ideas: <https://www.youtube.com/watch?v=7eh4d6sabA0>

SUBMISSION REQUIREMENT:

Submit Jupyter notebook and demo video via WhatsApp
